

If you are worried about having a CT scan and would like to talk to someone, you can contact:

- Your doctor
- Your local Learning Disabilities Team

Having a CT scan

This leaflet explains what happens when you go to hospital for a CT scan.

Produced by Michelle Forster, Marianne Duffy and Sally Poole on behalf of the Access to Health Project and The Community Healthcare Team, Islington Learning Disabilities Partnership with help from the radiography department at the Whittington Hospital.

Illustrated by Sally Poole.

A CT scan is a special type of x-ray like a photograph of any part of your body.

It can show the doctor if there is anything wrong with you.

It is done in a hospital by a radiographer.

It does not hurt!

This leaflet tells you what will happen when you have a CT scan of your brain.

- **About a week later the results will be sent to the doctor who will tell you what they mean.**

- The bench will move slowly through a hole in a special wall. Don't be frightened, it won't hurt!

- You will hear a whirring noise.
- You must lie very still so that the photographs are clear.

- The bench will move slowly out of the hole.
- This means your CT scan has finished.
- The radiographer will say you can get up and go.

- The radiographer will ask you to lie down on a bench.
- A strap will be put around your head to keep it still.
